

THE AVIFAUNA OF LOS ANGELES COUNTY

March 2017 [incorporating changes from 57th Supplement to AOU checklist]

Kimball L. Garrett, Natural History Museum of Los Angeles County

This list includes 523 bird species recorded in Los Angeles County through March 2017, including 515 species known to have occurred naturally as well as eight introduced bird species with long-term naturalized populations in the County; two additional species are currently under review by the California Bird Records Committee. The list includes offshore waters within 200 miles of land for which the nearest point of land is within Los Angeles County (including San Clemente and Santa Catalina Islands). Taxonomy and nomenclature follow that of the American Ornithologists' Union, through the 57th supplement to the A.O.U. checklist (July 2016). Symbols are explained at the end of the list.

Explanation of Symbols

I = introduced

E = original wild populations extirpated from County (current population of California Condor is reintroduced)

* = county rarity (generally not of annual occurrence); details of sightings required

** = on CBRC review list; details and CBRC submission of sightings required

[S] = species in brackets on California Bird Records Committee [CBRC] “Supplemental List” (natural occurrence uncertain)

[I] = introduced species in brackets are not counted in checklist total because they are not accepted by CBRC as established exotics in California, because their former Los Angeles County populations are now gone (Ring-necked Pheasant), or because the species is native to California but the populations in Los Angeles County are introduced (Gambel’s Quail, Northern Cardinal). Many additional species have small, recently established or ephemeral breeding populations in Los Angeles County but are not included on the list above.

[?] = species in brackets with [?] symbol are in review by CBRC
